

Certificate Verification Policy

Effective Date: May 17, 2026

Last Updated: May 17, 2026

Every certificate issued by SoloSuccess Academy carries a unique verification code that can be validated publicly. This policy describes how certificates are issued, verified, and revoked.

Eligibility

A certificate is issued when ALL of the following are true:

- The student has a verified, paid purchase of the course.
- Every lesson in the course is marked complete in *user_progress*.
- The student passes the Final Exam ($\geq 70\%$).
- The student submits the Capstone Essay and all required Project Milestones.
- No outstanding academic integrity findings are unresolved.

Eligibility is enforced server-side by the row-level security policy *Users can create certificates for completed courses* together with the *has_completed_course* database function.

Verification Code

Each certificate carries a random, unguessable verification code. Anyone with the code can verify authenticity via the public verification page at <https://solosuccessacademy.app/verify>, which calls the security-definer function *verify_certificate_by_code*. Verification returns: student name, course title, issue date, and revocation status (if any).

Revocation

We may revoke a certificate if:

- An academic integrity violation related to the course is upheld.
- The underlying purchase is refunded, charged back, or fraudulent.
- The certificate was issued in error.
- The student requests revocation in writing.

Revocation is logged with *revoked_at*, *revoked_by*, and a *revocation_reason*. Revoked certificates remain queryable so that any third party who previously received the code can verify the current status. Revocation appeals follow the same process as Integrity Appeals — email Support@solosuccessacademy.cloud within 14 days.

Non-Accreditation Notice

Certificates issued by SoloSuccess Academy are non-accredited. They demonstrate completion of our published curriculum and successful demonstration of skills, but they do not constitute a degree, diploma,

government-recognized credential, or professional license.

LinkedIn Integration

Students may add certificates to their LinkedIn profile via the built-in "Add to LinkedIn" button on the certificate page. The verification URL is embedded in the LinkedIn entry so recipients can independently verify.
